

# How to publish SAXS data

---

Jesse Hopkins, PhD  
IIT/CSRRI  
Staff Scientist, BioCAT  
Sector 18, Advanced Photon Source

# How to publish SAXS data

- SAXS data is extremely powerful, but there are many ways it can go wrong
- Need to take care during analysis to not fool yourself
- Need to present data correctly in publications to not fool your readers
- Accurately and honestly present strengths and limitations of data
  - Imperfect data can be used. For example, a small amount of aggregation could be accepted if you were simply using the SAXS to verify flexibility

# Publication guidelines

*2017 publication guidelines for structural modelling of small-angle scattering data from biomolecules in solution: an update.* J. Trewhella, A. P. Duff, D. Durand, F. Gabel, J. M. Guss, W. A. Hendrickson, G. L. Hura, D. A. Jacques, N. M. Kirby, A. H. Kwan, J. Pérez, L. Pollack, T. M. Ryan, A. Sali, D. Schneidman-Duhovny, T. Schwede, D. I. Svergun, M. Sugiyama, J. A. Tainer, P. Vachette, J. Westbrook and A. E. Whitten. *Acta Cryst.* (2017). D73, 710-728.

- <https://doi.org/10.1107/S2059798317011597>
- Open access

Provides guidelines for how to present data, what data to present so that readers can independently assess quality of data and models presented.

# Publication guidelines

---

- Reporting guidelines with summary tables for:
  - Sample details
  - Data acquisition and reduction
  - Data presentation, analysis, and validation
  - Structure modeling
- Example report, including figures and tables, on SEC-SAXS from three well-known proteins
- Template reporting table

# Publications guidelines

A. Intensity and  $R_g$  vs. frame number or time

B.  $I(q)$  vs.  $q$  as log-lin, Guinier fits

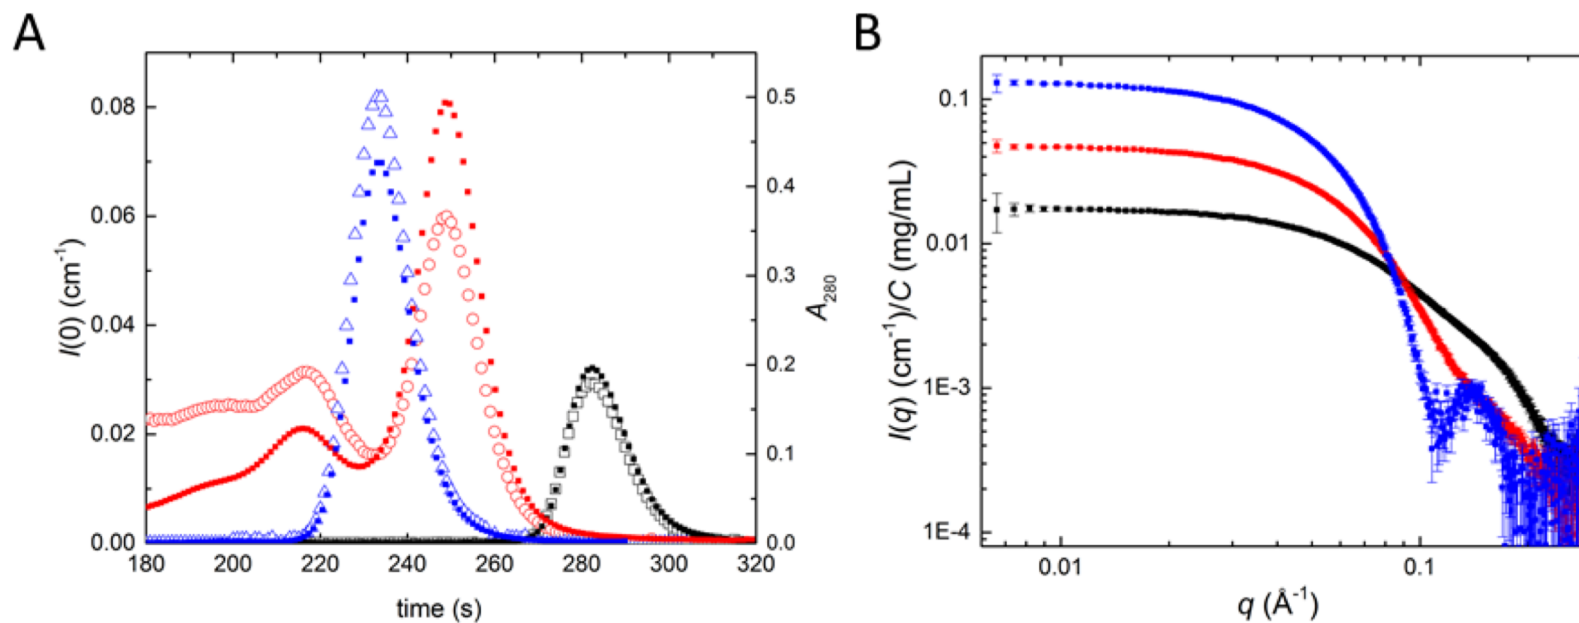

C. Dimensionless Kratky plots (puts all proteins on similar scale, highlights flexibility and shape)

D.  $P(r)$  vs.  $r$  profiles, normalized to equal area (i.e. by  $I(0)$ )

# Publication guidelines

A. UV traces, which should correspond reasonably well to SAXS curve

B. Log-log plots showing appropriate low- $q$  behavior

# Publication guidelines

For modeling results, fits to data should be shown, as should residuals

Paper recommends plotting error weighted residuals

$$\frac{\Delta}{\sigma}(q) = \frac{I_{exp}(q) - cI_{mod}(q)}{\sigma(q)}$$

# Publication guidelines

## Report sample details

	GI (tetramer)	BSA	CaM
Organism	<i>Streptomyces rubiginosus</i>	<i>Bos taurus</i>	<i>Xenopus laevis</i>
Source (catalogue No. or reference)	Hampton Research (HR7-100)	Sigma–Aldrich (A3294)	<i>E. coli</i> expressed (Michie <i>et al.</i> , 2016)
UniProt sequence ID (residues in construct)	P24300 (2–388)	P02769 (25–607)	P62155 (2–149)
Extinction coefficient [ $A_{280}$ , 0.1% (w/v)]	1.075	0.646	0.178
$\bar{v}$ from chemical composition ( $\text{cm}^3 \text{g}^{-1}$ )	0.732	0.732	0.716
Particle contrast from sequence and solvent constituents, $\Delta\bar{\rho}$ ( $\rho_{\text{protein}} - \rho_{\text{solvent}}$ ; $10^{10} \text{cm}^{-2}$ )	2.87 (12.39 – 9.52)	2.86 (12.38 – 5.92)	3.09 (12.61 – 5.92)
$M$ from chemical composition (Da)	172912	66400	16842
SEC–SAXS column, 5 × 150 mm Superdex S200			
Loading concentration ( $\text{mg ml}^{-1}$ )	6	25	20.2
Injection volume ( $\mu\text{l}$ )	30	35	35
Flow rate ( $\text{ml min}^{-1}$ )	0.45	0.45	0.45
Average $C$ in combined data frames ( $\text{mg ml}^{-1}$ )	0.58 (0.20–1.09)	1.81 (1.01–2.45)	3.09 (2.38–3.55)
Solvent (solvent blanks taken from SEC flowthrough prior to elution of protein)	25 mM MOPS, 250 mM NaCl, 50 mM KCl, 2 mM TCEP, 0.1% $\text{NaN}_3$ pH 7.5		

# Publication guidelines

## Report data collection parameters

Instrument/data processing	Australian Synchrotron SAXS/WAXS beamline with Dectris PILATUS 1M detector (Kirby <i>et al.</i> , 2013)
Wavelength (Å)	1.0332
Beam size (µm)	250 × 130
Camera length (m)	2.683
$q$ measurement range (Å <sup>-1</sup> )	0.00663–0.3104
Absolute scaling method	Comparison with scattering from 1 mm pure H <sub>2</sub> O
Normalization	To transmitted intensity by beam-stop counter
Monitoring for radiation damage	X-ray dose maintained below 210 Gy, data frame-by-frame comparison
Exposure time	Continuous 1 s data-frame measurements of SEC elution
Sample configuration	SEC–SAXS with sheath-flow cell (Kirby <i>et al.</i> , 2016), effective sample path length 0.49 mm
Sample temperature (°C)	22

# Publication guidelines

- These guidelines are extremely thorough. Follow them as best you can and you “won’t mislead or be misled” (J. Trewhella)
- The paper includes a supplemental word document with the tables that you can download and fill out

**Table S1** Reporting template for tabulating essential SAS data acquisition, sample details, data analysis, modelling fitting and software used.

(a) Sample details	Sample 1	Sample 2	Sample 3, <i>etc.</i>
Organism			
Source (Catalogue No. or reference)			
Description: sequence (including Uniprot ID + uncleaved tags), bound ligands/modifications, <i>etc.</i>			
Extinction coefficient $\epsilon$ (wavelength and units)			
Partial specific volume $\bar{v}$ ( $\text{cm}^3 \text{g}^{-1}$ )			
Mean solute and solvent scattering length densities and mean scattering contrast $\Delta\rho$ ( $\text{cm}^{-2}$ )			
Molecular mass $M$ from chemical composition (Da)			
For SEC-SAS, loading volume/concentration, ( $\text{mg ml}^{-1}$ ) injection volume ( $\mu\text{l}$ ), flow rate ( $\text{ml min}^{-1}$ )			
Concentration (range/values) measured and method			
Solvent composition and source			

# Data deposition

It is now recommended (but not required) that you deposit your SAXS data in an online repository

- Most commonly the SASBDB (<https://www.sasbdb.org/>)

Sign in | Register

# SASBDB

Small Angle Scattering Biological Data Bank

Advanced search    E.g. SASDBF4, Lyz, Nucleic Acids Res

## Curated repository for small angle scattering data and models

Small angle scattering (SAS) of X-ray and neutrons provides structural information on biological macromolecules in solution at a resolution of 1-2 nm. SASBDB is a fully searchable curated repository of freely accessible and downloadable experimental data, which are deposited together with the relevant experimental conditions, sample details, derived models and their fits to the data.

**SASBDB currently contains:**  
846 experimental data sets  
1277 models  
255 experimental data sets on hold  
336 models on hold

### Recent depositions:

# Publishing your BioCAT results

- In addition to getting the science right, we need you to help us
- When publishing results from BioCAT, you need to include the following acknowledgement (most facilities have similar):

This research used resources of the Advanced Photon Source, a U.S. Department of Energy (DOE) Office of Science User Facility operated for the DOE Office of Science by Argonne National Laboratory under Contract No. DE-AC02-06CH11357. "This project was supported by grant 9 P41 GM103622 from the National Institute of General Medical Sciences of the National Institutes of Health." Use of the Pilatus 3 1M detector was provided by grant 1S10OD018090-01 from NIGMS.
- User output is how we justify our existence to the NIH. So if you want to keep collecting SAXS data here, we need you to acknowledge us
- Publications with results from BioCAT also need to be submitted to PubMed and made open access according to the NIH public access policy

# Publishing your BioCAT results

- We want you to get it right
- Questions about data analysis, contact us
- Want us to read over your methods section or check your analysis, contact us
- Any time you collect data, you should get a handout with the acknowledgements, sample methods section, and the relevant tables filled out. Take a look.
